Re: Anderson Systems Integration (ASI)
Ron Anderson

To Whom It May Concern:

I have been a customer of ASI's for several years, both thru my business and at my home. Five years ago I had ASI install a security system and an extensive sound system in my lake house at Lake Santee when the house was undergoing an extensive remodel.

Ron had been in my home before and had observed I had, what I thought was an extensive sound system, which was installed when the house was built in 1994. Ron was excited to tell me about the new MZC system that he had available, which virtually centralizes all of the components, sound, DVD, etc. in one location but allows you to control and watch, or listen to the same feature or different features in any of the zones that the system has. I chose 6 (six) zones for my lake house.

I was so impressed with this system that I had ASI replace my sound system in my home where we chose the MZC with 8 (eight) zones. All I can say is wow what a leap forward with technology.

ASI also has installed an external surveillance DVD video system for my business at my used vehicle location. This has helped reduce and deter theft after business hours. This system has a high quality recording on an internal hard disc which holds recorded data for approx. 2 weeks.

Technology is great, but with out dependable service and installation the technology will not serve you. This is also a strong point for ASI, top shelf installation, and service of the product promptly when needed.

I hope this letter helps swing your decision to use Ron Anderson and his ASI staff.
